

Trading agent is a program that gather analitical data from TradingView and executes financial transactions against Binance.us trading platform automatically. You have full control over your trading strategy.

Prerequisites:

Gmail account, Tradingview account, Binance account.

Application uses [Binance API key](#) and [Google OAuth 2.0](#) authentication, that means it delegates security to Google, and Binance service providers. Trading agent does not sell, keep or expose user data to author or any third party.

It is in the begginging stage of development we do not manage trading data for the user, as it is free service you would need to setup few services on your own.

## **Here is a short instruction on how to start trading with Trading agent:**

You would need:

1. Google Email. This is needed to recieve live real-time notifications or trading signals from TradingView when market moves. You need to setup Google cloud and with credentials to allow "Trading agent" access your email box. It is recomendend you create a new Google account and email box before hand. After you created your email box, follow [Create access credentials](#) | [Google Workspace](#) | [Google Developers](#). Save your Credentials.json to local folder with rest of the "Trading agent" files.
2. Binance account and API key. [How to Create API Keys on Binance](#) | [Binance,api,create](#) Copy your credentials over into BianaceCredentials.txt
